INTRODUCTION

This publication by the Alberta Department of the Environment, Technical Services Division is the 1991 edition of the Reference Index for data collected and hydrographic surveys carried out by the Survey Branch on selected lakes and reservoirs in the Province.

In order to present the user with a comprehensive list of lakes and reservoirs being monitored in the Province, other known data sources are included.

The following is an explanation of the headings in the tabulation:

Name of Lake or Reservoir and Station Number

The assigned name and number serves as station file identification.

Location

The legal land description shows approximately where the water level is being measured. The common abbreviation of the description is used; i.e., west of a given meridian, range, township and quarter section given in the order of right to left. Thus, SW 35-38-7-W5 is the southwest quarter of section 35, township 38, range 7, west of the fifth meridian.

Water level

Column 1 Is the period of record for which water level data are available.

Column 2 Indicates the frequency of observation throughout the open water period.

- M - indicates miscellaneous. The frequency of observation may vary between four (4) readings per year and one (1) reading per week.
- D - indicates daily or almost daily. The frequency of observation may vary between two (2) readings per week and one (1) reading per day.

Column 3 Indicates the reference datum of the bench mark used for lake level elevations.

- Asd - Bench mark datum is assumed and held constant for that period of record.
- GSC - Run from Geodetic Survey of Canada datum.
- PFRA- Prairie Farm Rehabilitation Administration datum.
- LNID- Lethbridge Northern Irrigation Districts datum.
- CPL - Canadian Pacific Limited datum.
- CNR - Canadian National Railways datum.
- USRS- United States Reclamation Service.

Column 4 Indicates the source of data

- E - Alberta Department of the Environment, Technical Services Division, Survey Branch, Water Survey Section.
- WRB - Environment Canada, Water Resources Branch.
- TAU - Transalta Utilities.

Bathymetric Survey

Column 5 Hydrographic survey maps are available for those lakes which have an asterisk in column 5 from:

Area and Capacity

Column 6 The surface area and volume have been determined for those Lakes which have an asterisk in column 6. In some cases, an area-capacity curve is drawn.

Remarks

This column provides added information.
